

Demonstration of Evapo-Rust® to de-rust metal parts

EVAPORUST™

Step 1:

Two identical sintered metal parts, both clean and rust-free.

Evapo-Rust demonstration, continued

EVAPORUST™

- Step 2:** Placed parts in container large enough to be completely submerged (above left). Covered parts with tap water. Soaked for 24 hours at room temperature.
- Step 3:** Removed parts from water bath. Dried in open air at room temperature. Parts exhibited significant surface corrosion (above right).

Evapo-Rust demonstration, continued

EVAPORO-RUST™

Step 4:

Placed one of the corroded metal parts into the container and covered with Evapo-Rust. Liquid at room temperature.

10:30 a.m. Began soaking.

10:50 a.m. Pieces of corrosion started falling off the metal and onto the bottom of the plastic tub.

11:30 a.m. Part was nearly clean.

Evapo-Rust demonstration, continued

EVAPORO-RUST™

Step 5:

12:15 p.m. Continued to observe metal as it de-rusted.

Evapo-Rust demonstration, continued

EVAPO-RUST™

Step 6:

12:45 p.m. Removed part from liquid. Poured Evapo-Rust back into gallon container, to be used again.

Evapo-Rust demonstration, continued

EVAPORUST™

Step 7:

3:30 p.m. Cleaned part (at right) is dry and corrosion-free.

Conclusion

EVAPO-RUST™

- Repeat demonstration, using:
1. Remaining corroded metal part
 2. Evapo-Rust solution
